Position Statement of EUSEN

Minimum standards for nurses working in Emergency Departments

Purpose
To create a common European standard that defines and promotes a minimum level of competences for nurses working in any European Emergency Department (ED).

Introduction
When members of the public present to an Emergency Department they expect to receive the best evidence based care available, delivered by highly skilled professionals. In Emergency Departments, patients of all ages present with conditions of differing levels of acuity and requiring multiple speciality input. This means that at all times suitably skilled staff, with a wide range of equipment, need to be available to perform assessments, stabilise as required and administer treatments.

Standardised competencies for Emergency Nurses will ensure that all patients receive a safe level of care and will lead to improved patient outcomes.

There are variable standards of emergency nursing practice throughout Europe.

Position

Emergency Nursing is a separate speciality within the nursing profession.

Emergency nurses should possess the following characteristics:

- Professional accountability
- Strong clinical observation skills
- A wide range of clinical knowledge
- The ability to logically prioritise
- A strong commitment to teamwork
- An agile mind to deal with the unpredictability around the patient’s condition and the reaction of the accompanying person.
- The ability to re-prioritise and refocus based on patients changing clinical conditions.
- The ability to provide supportive holistic care to patients and their relatives / carer
- A commitment to continuous education in the field of Emergency Nursing
Glossary

Emergency Nurse:
A Registered Nurse that has an academic qualification (Diploma or preferably a Bachelor Degree) with substantial experience in the Emergency Department setting and who is able to demonstrate clinical performance to a set of standards.

Patient:
An individual who is under medical care or treatment.

Patient population:
Anyone who presents to a health care facility seeking assistance or treatment.

In Emergency Departments the patient population can consist of all ages, genders, cultural and linguistic groups. This particular patient population has a wide range of clinical presentations including all levels of acuity and complexity, as well as potentially requiring multiple speciality input.

Statements

Competence

Competence is an ability with a theoretical basis that can be practically assessed. An individual who achieves competence must have a defined level of theoretical knowledge and the ability to demonstrate a practical application of those skills in a wide range of clinical scenarios.

Emergency Department Nurse Competencies

1. Clinical skills
2. Communication skills
3. Teamwork/collaboration
4. Knowledge and scope of practice
5. Professional development
6. Organisational awareness
7. Research
8. Quality improvement
1. **Clinical skills**

   - Early detection of critical presenting symptoms.
   - Assessment of patients based on the Airway, Breathing, Circulation, Disability and Exposure (ABCDE) methodology.
   - Initiation of timely nursing interventions in accordance with evidence based clinical pathways and guidelines.
   - Continuous assessment and early escalation of care based on clinical knowledge to minimise the risk of deterioration.
   - Application of critical thinking skills to recognise and actively participate in the treatment of a wide range of clinical presentations.
   - Utilisation of Triage as a dynamic process to ensure continuous prioritisation of patients based on clinical needs.
   - Application of the triage process to ensure that the patient is seen within the right time, in the right place by the right caregiver for the right reason.

2. **Communication**

   - Communicates effectively and professionally with patients, relatives and the multi-disciplinary clinical team
   - Utilisation of available technologies to maximise communication and support patients’ independence and autonomy.
   - Communicates with all members of the multi-disciplinary team prioritising a patient centred approach.
   - Communicates in a professional manner.
   - Delivers clear, concise, accurate and timely communication.

3. **Teamwork/collaboration**

   - Co-ordination and participation within the multi-disciplinary team to respond to the patients’ needs based on clinical urgency.
   - Recognition and response to all emergency and disaster situations.
   - Appropriate initiation of referrals to multi-disciplinary team members or service providers outside the Emergency Department to support individualised patient care.

4. **Knowledge and scope of practice**

   - Application of emergency nursing care within individual professional scope of practice and seeks support or guidance as appropriate.
   - Actively seeks feedback from colleagues whilst critically reflecting on personal professional nursing practice.
5. Professional development

- Has achieved or is working towards a postgraduate qualification in Emergency Nursing.
- Maintains a professional portfolio that includes documented learning and performance goals.
- Participates and contributes to activities or events that enhance the profile of emergency nursing.

6. Organisational awareness

- Functions as a professional representative of the Emergency Department.
- Manages space within the Emergency Department to achieve maximum efficiency and optimise patient flow.
- Proactively manages patient flow to minimise the impact of access block and to optimise patient safety.
- Actively maintains and supports professional networks both inside and outside their healthcare organisation.
- Demonstrates a thorough working knowledge of departmental and organisational policies and procedures.

7. Research

- Participates in and supports research that promotes emergency nursing.
- Promotes a culture of research and evidence based practice within the emergency nursing care profession.

8. Quality improvement

- Takes personal responsibility for professional development.
- Actively contributes to the development of professional standards in Emergency Nursing.
- Promotes and participates in a culture of continuous quality improvement within the emergency nursing profession.
**Nursing interventions**

A/B: Assessment of airways and breathing. Administration of oxygen, nasal, oral or inhalational medications (nursing standing orders).

C: Assessment of circulation, intravenous (IV) cannula insertion, administration of IV medications and completion of an Electrocardiograph (ECG).

D: Collection of the patient’s vital signs, blood sugar level (BSL) and Glasgow Coma Scale (GCS).

E: Completion of a full body check (head to toe), clinical assessment and application of casts or wound dressings.

**Others:**
Collection of blood or urine samples, insertion of urinary catheter, ordering of limb X-rays as appropriate.
